

Introduction:

Thesis:

People are slowly realizing that The environment is reflecting the damage that the economic sector does to it, and are trying to fight the effects

Introduce that many things can be the cause or be involved with the problem that causes climate change to happen. Introduce how mainly, economics and production industries. Finally, also bring into audience's' perception that climate change also involves the work of political reasons, to a certain extent. But mainly, it is still economy and industry that are the main factors that affect climate change.

First Body Paragraph:

Briefly give an explanation of what exactly what climate change is. Also, talk about how climate change is affected by economy. Talk about how big companies can produce lots of emissions from factory produce, distribution transportation, and resource creating processes such as coal and fossil fuels being burned can create stains of emissions, which in turn can harm the environment.

Second Body Paragraph:

www.epa.gov/ghgemissions/sources-greenhouse-gas-emissions

For sources and information about how companies exactly are harming the environment, and how by producing emissions, our economic sectors are causing climate change. The two websites provided are to back up with legitimate information. , and help with the explaining of why the economic sector may be partially responsible for climate change, and how it is responsible for climate change.

Third Body Paragraph

Introduce how the economic is also affected by climate change just as much as it does affect the environment. Speak about consequences such as rising sea levels and droughts being very difficult to pass obstacles for many industries, and economical services to be able to survive and to prosper. Additionally, state that it is already statistically proven that climate change is already starting to have an affect on people and industry.

Fourth Body

Provide hardcore evidence and researched information that backs up points and views mentioned in the Third Paragraph. Use the following websites in the listed order, and back up points with quotes, numbers, and interpretations.

http://link.galegroup.com/apps/doc/A444071134/GlC?u=ko_k12pr_d63&xid=09eds7a6

<http://news.mit.edu/2017/climate-change-drought-corn-yields-africa-0316>

Write about how climate change is becoming an issue of greater seriousness as time progresses, and speak about how it is still possible to reverse the effects, according to “Before the Flood” Pull up the following article

www.thecanadianencyclopedia.ca/en/article/carbon-pricing-in-canada/.

The idea is to use this article to slowly wade into the next question answering topic: What is my sector doing to help combat the effects?

Fifth body paragraph

www.thecanadianencyclopedia.ca/en/article/corporate-climate-crusaders-against-climate-change-laws

!

Ease into the very sensitive topic of what we are doing to combat the effects of climate change, what we are not doing, and what we should be doing with the previous listed link. It mentions how many companies such as Johnson and Johnson are very reluctant to bend over to rules and are willing to fight the law in order to preserve their companies. Then, also point out that there are already many companies such as Google that are lobbying in favor of the new laws regarding climate change.

Sixth Body Paragraph

“Global Climate Change Adaptation and Mitigation.” NASA, NASA, 23 Aug. 2017, [kclimate.nasa.gov/solutions/adaptation-mitigation/](https://climate.nasa.gov/solutions/adaptation-mitigation/).

This link provides the grader of the essay with more research and hard information regarding as to what companies and the economical and researching development sectors, so modern advancements, technology, services, and businesses are doing in order to combat the effects of climate change. NASA, a well-known astronomy researching institution, has created a carbon emission monitoring tool, and this tool is described more thoroughly through the information from their website.

Relate this tool to climate change, while during this time continuously mentioning how it is involved in combating the effects of climate change in regards to the economic sector.

However, be sure to also mention that some progress has already been made, in regards to the emissions created and energy consumed by individuals and companies, throughout the years from 1990s to 2015, how the carbon footprints of individuals and corporations have both declined.

Conclusion

Summarize how the economic sector is also being affected by climate change, and how although it has been a main cause of climate change, it is also constantly innovating and finding new, creative ways to combat the effects of climate change. Speak of the progress

that the sector has already made, and wrap it up, saying that there is still hope, and a great future awaits.
