

MISSION STATEMENT

I have always wanted to make a difference in people's lives and have always been interested in solving problems, specifically in the areas of the sciences and mathematics. In addition, I am interested their real-world applications. The combination of these interests and my values of perseverance, passion, and determination is reflected in my skills as I am able to visualize complicated structures and ideas. Moreover, I enjoy and excel in activities related to the sciences and mathematics. With this in mind, I aspire to become a nanotechnology engineer as I would get the opportunity to create tools and resources to help others and create innovative designs that could potentially change the world. To achieve my goal, I will take and excel in my physics, mathematics, chemistry, and biology courses, do well on my AP tests, and earn a degree in Nanotechnology Engineering from a prestigious university such as the University of Waterloo.
